## 403(b) Plan Response to Current Conditions

## Introduction

PSCA's 403(b) Plan Response to Current Conditions reflects responses from 579 not-for-profit organizations that currently sponsor a 403(b) plan. Data in this survey is often categorized by plan size. Plan size is determined by the number of active participants in the organization's plan. Please note that the figures in the survey do not always add up to 100.0 percent due to rounding. Each section includes graphs that illustrate some of the data. These graphs do not necessarily correlate directly to a data table. A copy of the survey questions can be found on pages 17-18. Please direct questions or comments to research@psca.org or 312.419.1863x203.

## Survey Questionnaire - Pages 17-18

## Overview of Results

In October 2011, PSCA conducted a snapshot survey of 403(b) plan sponsors to determine how they are responding to multiple changes in today's economic and regulatory environment. We received 579 responses from 403(b) plan sponsors of varying sizes and geographical locations. A summary of the results follows.

## Organization Contributions

The majority of 403(b) plan sponsors have continued to make contributions to their plans during the last four years. Many plan sponsors that did suspend or reduce organization contributions are restoring them to previous levels. Organizations seem to be restoring matching contributions faster than non-matching contributions.

More than 70 percent of organizations have continued to make matching contributions at the same levels they were prior to January 1, 2008. Only 4.8 percent of organizations report that their matching contribution is currently suspended, down from 8.7 percent in 2010 , and 15.3 percent in 2009. In 2009, 24 percent of organizations with 1,000 or more participants reported that they had suspended their matching contribution; now no large organizations report having a suspended match. More than five percent of organizations increased their matching contribution and 3.8 percent added a match. Nearly 40 percent of organizations that suspended or reduced their matching contribution during the last four years have already restored it to previous levels.

Nearly 75 percent of organizations made no changes to their non-matching (profit sharing) contributions during the same time period. Six percent of organizations report that their non-matching contribution is still suspended, down from 9.6 percent in 2010, and 12.4 percent in 2009. A little more than 8 percent of plans currently make non-matching contributions at a reduced rate. One-quarter of organizations that suspended or reduced the non-matching contribution during the last four years have restored it to previous levels.

## Participant Contributions

Organizations indicated increases in plan participation and little change in participant deferral rates in the last year. Nearly 45 percent of respondents indicated an increase in participation last year, up from 38 percent reporting an increase the previous year. Only 10 percent of organizations indicated a decrease in participation last year, down from almost 15 percent the previous year. More than half of organizations indicated that there has been no change to participant deferral rates in the last year, with 10 percent indicating a decrease in deferral rates.

## Organization Actions

Plan sponsors took a variety of actions in the last year in response to regulatory and economic changes. More than half of organizations increased their employee education efforts with one-quarter providing education specifically on market volatility. Organizations are also focusing on investments more than 30 percent of organizations changed the investment lineup in the last year, including nearly 65 percent of organizations with 1,000 or more participants. Half of organizations have a committee responsible for reviewing fund performance and/or plan compliance, including nearly 90 percent of organizations with 1,000 or more participants.
